

We're looking for your **experience** and **resources** to help a multidisciplinary team develop solutions to professionally submitted challenges in the field of mental health and neurotechnology.

Neuro Nexus takes real technical challenges submitted by doctors, researchers, and clinicians across Alberta and pairs them with teams of multidisciplinary Innovators who work to produce a proof-of-concept solution. Undergraduate and graduate students from a wide range of fields are part of the teams, coming from medicine, health sciences, engineering, computer science, and business. Your expertise can help to shape the solution produced by the teams of innovators, helping them find the answers to move past some hurdles in minutes, instead of working down a blind alley for hours or even days.

While those blind alleys can be useful learning experiences, in this 6-week competition, every day counts! Having a support network capable of pointing them in the right direction is invaluable. What we do is find the gaps in knowledge the teams have, and pair them with experienced mentors, like you.

Check out www.neuro-nexus.ca for more information.

Ways to **get involved**

Providing individual video consultations to teams to help shape strategy throughout the competition and/or during Health Hack Weekend

Responding to emailed questions from a matched team

Working with us to develop a workshop on a specific subject

Donating tool/equipment time for loan or crowdsourced team use

Historically this has amounted to about an hour a week of a mentors time, sometimes as little as answering an email or two; with **many choosing to get even more involved** with a team as the competition progresses!

Apply at neuro-nexus.ca/mentors as soon as possible and we will be in touch!
We are also happy to answer any questions: engagement@neuro-nexus.ca
